Our new 5 Head CNC Moulder

Want your project to stand out from the rest? Custom Milled PVC Moulding will surely do that! From PVC Crown Moulding to Panel Moulding, Base Moulding, Capital Moulding, Window Trim and so on. We can also match old rotted out wood moulding profiles and remake them with PVC.

This gives an Architect the ability to draw their own profiles or use moulding profiles that are not usually available in PVC. 3D Printed samples are available for profiles that don't yet exist.

We can also supply aluminum to reinforce PVC handrails and other structural profiles

Our custom PVC Mouldings are a great choice for any moisture rich environment. Naturally for exterior millwork applications but also for interior millwork such as bathrooms, laundry rooms, basements and indoor pools.

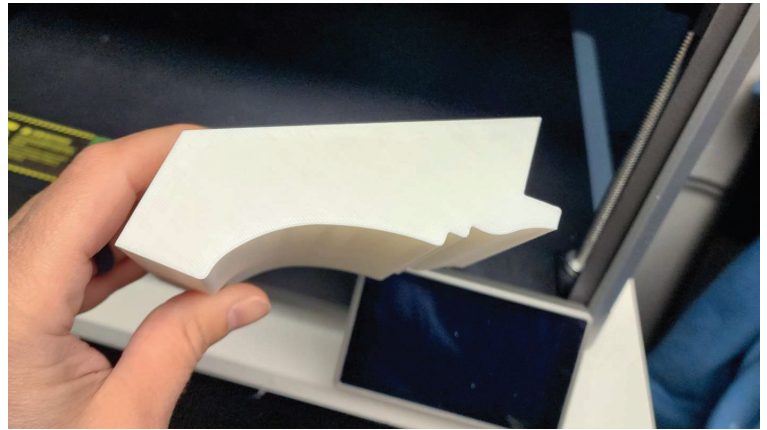

PVC is also a great choice for commercial applications like baseboards in apartment building hallways that will get mopped often and won't be affected by water and chemicals.

Simply send us an email with the mouldings drawn by the architect or get us a sample of the old wood moulding that you want to replicate.

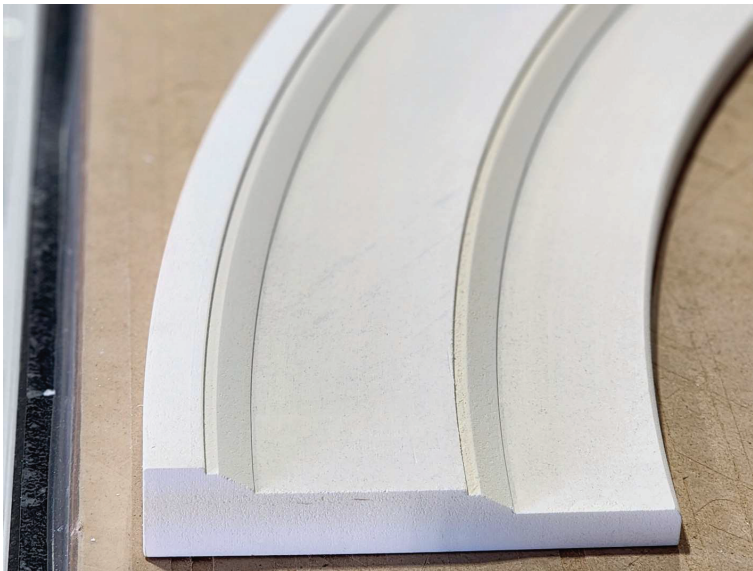

An added bonus is that we ship all of our PVC dust from running the mouldings back to get recycled into new material.

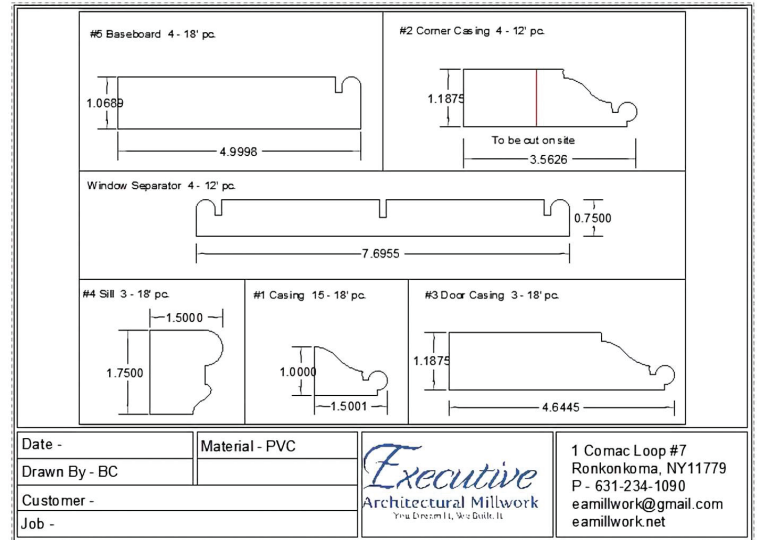

Replicating Wood Profiles

3D Printed Samples Available

Curved & Heat Bent

Approval Drawings

Milled Handrails

Custom Knives

PVC Millwork Package

CNC Cut Dentil Mouldings

All of our Dust & Scraps are shipped back to be Recycled into new material.
